

ProShip[®] SUITE

ProShip[®] is the Best Multi-Carrier Parcel Shipping & Freight Software

AES Direct

FedEx Compatible

3 Reasons Your Company Should Use ProShip[®]

ProShip[®] is loaded with Rich Features

CREATES SATISFIED CUSTOMERS AND FAST ROI

ProShip's affordable solution and extensive features will improve customer service and provide a fast ROI. It will turn your shipping department into a profit center, increase repeat customers and minimize mistakes. It is designed to deliver exceptional processing speeds (up to a million packages an hour on a single server) while applying the most complicated business policies.

ProShip's sophisticated rate-shopping abilities take advantage of various carrier services, options and discounts. Choose from a simple rate or delivery commitment comparison to complex scenarios, such as comparing truckload and hundredweight rates with services delivering to a specific location within a specified time frame.

ProShip can handle multiple package shipments in a variety of methods to better accommodate a warehouse's custom flow process. Its built-in packstation component is available for box-level operation such as content verification, serial number capture, package-specific insurance, COD options, weight validation, etc. "Reverse logistics" are also supported with carrier return-service options.

ProShip can customize labels to support compliance labeling, include additional barcodes, alternate return addresses, add a company logo or purchase order and reference information while retaining carrier label certifications.

Its multiple security and authentication options protect sensitive data and assist with Sarbanes-Oxley and HIPAA compliance requirements. It also has Hazardous Material/Dangerous Goods support for printing of 49CFR and IATA declarations.

ProShip handles advanced international shipment requirements including alternate import/export brokers and third party billing of duties & taxes.

ProShip keeps an unprecedented level of data regarding shipment history, interfaces to carriers for live package status and delivery information and may be configured to let your customers view their orders and shipment information instantly.

ProShip's scalable architecture allows implementations from a single workstation to an enterprise level solution with multiple servers for fail-over, standby, and load balancing operation. Its affordable licensing options are attractive for any small shipper, medium size warehouse or corporate enterprise. We also offer browser-based shipping, reporting and tracking (ProShip Office) for zero-footprint corporate visibility.

"ProShip took our business requirements and developed a system for FIFO product allocation, package weight verification, process reconciliation and lot tracking that has resulted in 'Error-Free Distribution Services'..."

UNIFIED SHIPPING SOFTWARE

ProShip[®] VELOCITY

A multi-carrier shipping system that seamlessly integrates shipping processes and information between your ERP system and carrier vendors

ProShip[®] OFFICE

Take control of all company shipping, including office activity, & achieve big savings and increased accountability

ProShip[®] LABELER

A powerful tool that creates labels and reports in all leading thermal label and laser printer languages

ProShip[®] SERVER

The heart of our unified shipping system, providing carrier-certified rates, labels and manifesting information

At the heart of successful shipping systems worldwide

ProShip® is Easy to Use

EASILY INTEGRATED AND UPDATED

ProShip is designed to integrate seamlessly with existing systems and technologies and to simplify the shipping process. Its rich configuration options allow it to access all necessary information while creating a one-touch shipping process.

Pop-up labels, animations, and sound effects effortlessly guide novice operators through a complex shipment. Dynamic screen layouts may be customized for alternate languages, on-the-fly forms, etc.

ProShip is equipped with device drivers for nearly all electronic printers, scales, dimensioning equipment, programmable logic controllers (PLCs), raster and optical scanners, and wireless devices. Its touchscreen-ready interface frees your workstations from keyboard and mouse.

ProShip can accommodate future ship dates as well as retain all past shipment information for an easy look-up or label reprint.

ProShip enables central deployment of changes to screen layouts, scripting, printing configuration, etc. Carrier rate and routing information is updated automatically and securely via Internet. Updating is quick and efficient.

ProShip is an integrator's dream. Its modular architecture allows for extensive customization without having to develop special versions of the software package. It can be used as a thick client with rich integration options, as a web-browser interface on any platform or as a "black-box" XML application programming interface. Free-form scripting clears integration from a static "mapping" interface while allowing support for plug-ins written in nearly any language. ProShip's XML inter-process communication anticipates future changes.

Hundreds of warehouse & manufacturing centers, from medium sized to Global 100, have placed their trust in us.

We hope you will join them..

ProShip® will save your company money.

Learn how today!
