

The Paperless Postal System

Zumbox is the world's first paperless postal system.

It provides an effective and practical alternative to traditional postal systems. For businesses, non-profit organizations and municipalities, Zumbox is also a powerful alternative to e-mail.

Zumbox is a brand new communications medium that lets you:

- Send mail as digital files to street addresses online
- Reduce paper, printing and postage costs
- Strengthen your customer relationships
- Drive additional traffic to your website
- Reduce your environmental impact

1 Mail recipients type in their street address at Zumbox.com.

2 Mail recipients see the mail sent to them as envelopes on their screen.

3 Mail recipients see the mail you send them exactly as if it were on paper.

How Does Zumbox Work?

Zumbox is a secure web-based platform and a closed system that enables mail senders to send postal mail in a paperless form. To facilitate this, we have created a digital mailbox – a Zumbox – for every street address in the U.S. Now all bills, statements, direct mail, catalogs, government communications and personal correspondence can be sent as digital files to street addresses online via Zumbox, and mail recipients can easily access their mail from anywhere at anytime via the Internet.

Why Use Zumbox?

Zumbox generates significant cost savings, revenue generating opportunities, time efficiencies and environmental benefits. With Zumbox, mail is delivered electronically, stored securely, and read privately, allowing for communications at a fraction of traditional paper, printing and postage costs. Zumbox is creating new channels to market and delivers numerous multimedia and document formats, transforming the mail experience from the ordinary to the extraordinary.
